DIFFICULTY

Ingredients

- ☐ 2 cups grated zucchini, squeezed dry
- ☐ 1 1/2 cups gluten free all-purpose flour blend
- ☐ 1/2 cup almond flour
- ☐ 1 teaspoon baking soda
- ☐ 1/2 teaspoon baking powder
- ☐ 1/2 teaspoon salt
- ☐ 1 teaspoon ground cinnamon

- ☐ 1/4 teaspoon ground nutmeg
- ☐ 3 large eggs
- ☐ 1/2 cup coconut sugar
- ☐ 1/3 cup melted coconut oil
- ☐ 1 teaspoon vanilla extract
- ☐ 1/4 cup plain Greek yogurt

Instructions

- 1** Preheat your oven to 350°F (175°C) and line a muffin tin with paper liners or grease well. Grate the zucchini and then place it in a clean kitchen towel or cheesecloth. Squeeze firmly to remove excess moisture but don't overdo it; you want the zucchini damp enough to keep the muffins moist but not soggy. This step is crucial because too much water will make the muffins dense and gummy, while too little will dry them out. ⌚ 10
- 2** In a large bowl, whisk together the gluten free all-purpose flour, almond flour, baking soda, baking powder, salt, cinnamon, and nutmeg. Mixing the dry ingredients first ensures even distribution of leavening agents and spices, which helps the muffins rise evenly and have consistent flavor. ⌚ 5
- 3** In a separate bowl, beat the eggs with the coconut sugar until well combined and slightly fluffy. Then add the melted coconut oil, vanilla extract, and Greek yogurt. Mixing the wet ingredients separately helps create an emulsion that traps air, contributing to a lighter muffin texture. ⌚ 5
- 4** Pour the wet ingredients into the dry ingredients and gently fold together using a spatula. Be careful not to overmix; just combine until no dry flour streaks remain. Overmixing can develop the gluten substitutes too much, leading to a tough texture. ⌚ 3
- 5** Fold in the grated zucchini carefully, distributing it evenly throughout the batter. The zucchini adds moisture and a subtle freshness that balances the warm spices. ⌚ 2
- 6** Spoon the batter into the muffin tin, filling each cup about 3/4 full to allow room for rising. Filling too full can cause overflow and uneven baking, while too little results in small, dry muffins. ⌚ 3
- 7** Bake in the preheated oven for 25–30 minutes, rotating the pan halfway through for even baking. Start checking at 25 minutes by inserting a toothpick into the center of a muffin; it should come out clean or with a few moist crumbs. ⌚ 25
- 8** Let the muffins cool in the pan for 5 minutes, then transfer to a wire rack to cool completely. Cooling prevents sogginess and helps the crumb set properly. ⌚ 10

- 9** Optionally, dust the tops with powdered sugar or brush with melted butter before serving for extra flavor and shine. This finishing touch adds visual appeal and a little extra richness. ☒ 2

Chef Tips

- ☒ Always squeeze out excess water from the zucchini but keep it slightly moist.

Zucchini contains a lot of water which can make muffins soggy if not removed. However, removing too much moisture will dry out the muffins. Squeezing gently ensures the right balance of moisture for a tender crumb.

- ☒ Use room temperature ingredients for even mixing.

Room temperature eggs, yogurt, and oil blend more smoothly, creating a uniform batter. Cold ingredients can cause the batter to curdle or mix unevenly, affecting texture and rise.

- ☒ Do not overmix the batter once wet and dry ingredients are combined.

Overmixing develops the structure too much, especially with gluten free flours, leading to dense or tough muffins. Fold gently just until combined for a light, tender crumb.

- ☒ Rotate muffin pan halfway through baking for even cooking.

Oven heat can be uneven, causing some muffins to brown faster. Rotating the pan ensures all muffins bake evenly with consistent texture and color.

- ☒ Let muffins cool completely before storing.

Cooling prevents condensation inside storage containers, which can cause muffins to become soggy or mold quickly. Proper cooling preserves texture and freshness.

- ☒ Add a sprinkle of cinnamon sugar on top before baking for a crispy crust.

This adds a sweet, slightly crunchy topping that contrasts nicely with the soft crumb and enhances the muffins' flavor and appearance.

❑ Freeze leftover muffins individually wrapped for longer storage.

Freezing preserves freshness and texture. Wrapping individually prevents freezer burn and allows you to thaw only what you need without waste.

Storage & Reheating

❑ Refrigerator

Refrigerate muffins in an airtight container for up to 5 days. They may firm up slightly but will stay moist. Warm slightly in the microwave before serving for best texture.

❄ Freezer

Freeze muffins individually wrapped in plastic wrap and placed in a freezer-safe bag for up to 3 months. Thaw overnight in the fridge or at room temperature, then warm in the microwave or oven.

❑ Reheating

Reheat muffins in a microwave for 20–30 seconds or in a 325°F oven for 5–7 minutes until warmed through. Adding a small pat of butter before warming enhances moisture and flavor.
